Example of data passing between different applications.

- Deepak Kumar Sood

AIDL_Example

1. SimpleScreenCapture - It is the app which records the screen video using MediaProjection api and records it using MediaManager and saves it in internal storage.
2. SimpleScreenCapture2 - It is the service running in background which will receive the location of saved video from the 1st application.

ContentManager

1. MyApplication - This application will save the data in database and has the content manager which will provide permission using Provider to other application.
2. RetrieveStudents - This will use permission provided by MyApplication and retrieve the students list from the database using content manager and display it.
